Microseeps test results meet all the requirements of the NELAC standards or provide reasons and/or justification if they do not.

Approved By: Rachel Whitby Date: 3/5/09

Project Manager: Rachel Whitby

The analytical results reported here are reliable and usable to the precision expressed in this report. As required by some regulating authorities, a full discussion of the uncertainty in our analytical results can be obtained at our web site or through customer service. Unless otherwise specified, all results are reported on a wet weight basis.

*As a valued client we would appreciate your comments on our service.
Please call customer service at (412)826-5245 or email customerservice@microseeps.com.*

Case Narrative: The ferrous iron, ferric iron, and divalent manganese were initially analyzed on 2/25/2009. The sample exhibited poor chromatography and peak shape. The sample was reanalyzed at a dilution. The percent recoveries for the batch MS/MSD analyses were outside of control limits. The LCS and all other QC analyses were acceptable. The total manganese analysis was performed by Pace Analytical Services

Data Qualifiers: J - estimated value, U - Non detect, R - Poor surrogate recovery, M - Recovery/RPD poor for MS/MSD, SAMP/DUP, B - detected in blank, S - field sample as received did not meet NELAC sample acceptance criteria, L - Subcontracted Lab used, N - NELAC certified analysis
